

## Building a High-Performance Website for a Scaling Business

### Executive Summary

As businesses scale, their digital infrastructure often becomes a bottleneck rather than an enabler. Outdated websites, poor performance, inadequate scalability, and limited integration with marketing tools constrain growth and damage brand reputation. Biswass IT Services Private Limited specializes in designing and building high-performance websites that grow with your business, deliver exceptional user experiences, and seamlessly integrate with your entire digital ecosystem to accelerate revenue and market presence.

### The Problem: Scaling Business Website Challenges

#### 1. Poor Website Performance and User Experience

##### Challenge:

Slow loading speeds (5+ seconds) causing visitor abandonment

Unoptimized images and resources bloating page size

Poor mobile responsiveness affecting growing mobile traffic

Outdated design and UI/UX not matching modern standards

High bounce rates due to poor usability

##### Performance Impact:

53% of users leave a website if it takes more than 3 seconds to load

Mobile users are 75% more likely to abandon slow sites

Search engine rankings penalized for slow performance

Lost revenue directly correlated with slower load times

Business Impact:

Reduced website traffic and conversion rates

Poor brand perception as unprofessional or outdated

Lost competitive advantage to modern competitors

Increased customer acquisition costs

Difficulty attracting venture capital or investment

## 2. Outdated Technology and Limited Scalability

Challenge:

Website built on legacy technology unable to handle traffic spikes

Database bottlenecks when traffic increases

Difficulty adding new features or making updates

Security vulnerabilities in outdated frameworks

Inability to handle payment processing and complex transactions

Impact:

Website crashes during traffic peaks (marketing campaigns, product launches)

Long
